

Lead Qualification Case Study

Successfully scheduled 60 demos and helped an innovator in database traffic management build a pipeline worth more than \$250000 in 2013

Database Traffic Management

Business Challenge

The customer is the pioneer in a new category of database infrastructure software that simplifies the way database environments are deployed and managed. Their primary product is a SQL traffic management engine that sits transparently between applications and databases to provide instant visibility into database problems deep real-time analytics.

Our goal was to identify and qualify opportunities in a very complex and competitive market comprising of India and Rest of APAC and to help them follow up on the leads gathered in major tradeshows.

Service Provided

We started with 1 full time employee (FTEs), working 8 hours every day to make cold and follow-up calls on leads to find out potential opportunities. We started calling in the month of Oct 2012 for Indian market and US region from Mar 2013 we were able to schedule 60 demos and successfully build a pipeline worth more than \$ 250k.

Our team's core responsibility was to follow up on leads gathered in major tradeshows and qualify the leads for the local reps to follow-up and go for the closures.
